

### **PHP DEVELOPER – Job description**

**We are searching for a creative and autonomous colleague, a person who likes challenges and works well independently, but also within a professional team. If you want to deliver end-to-end applications and be involved in all phases of the development lifecycle, here's your chance!**

#### **The ideal candidate:**

Flexible, motivated, able to adapt in a dynamic environment, able to efficiently communicate with certain customers/other development team members, pro-active in finding new ways for improvement.

#### **Main responsibilities:**

- Design and develop features and modules for e-Commerce applications
- Contribute in all phases of the development lifecycle (back-end and front-end)
- Write well designed, testable, efficient code
- Ensure designs are in compliance with specifications
- Prepare and produce releases of software components
- Support continuous improvement by investigating alternatives and technologies and presenting these for architectural review
- Optimization of the application (ensure database optimization and performance)
- Ensure data security (encryption) and application maintenance

## **Projects:**

Custom e-Commerce development for one of the most important players in the brokerage, insurance, risk management and consultancy industries – multinational company. The company wants to allow its clients to issue insurance policies online. The second phase of the project involves the integration of the e-Commerce application with the back-office system used within the organization, a Microsoft Dynamics CRM based product.

## **What's in it for you?**

- Very attractive salary
- Performance bonuses
- Private medical subscription
- Courses, trainings and certifications
- Young, fun, creative and professional team
- Dynamic and pleasant working environment
- Continuous improvement of your technical skills and latest technologies

## **Knowledge and abilities:**

### **Main criteria**

- BS/MS degree in Computer Science, Engineering or a related subject
- 2+ years of hands-on Software Development experience (OOP)
- 2+ years of experience in PHP development
- 2+ years of experience in CSS, HTML, JavaScript development
- Good experience with MySql or other database
- Good experience with Ajax
- Hands on experience in designing and developing e-Commerce applications is a plus
- Experience in insurance, brokerage or risk management industries represent an advantage
- Good communication skills and client oriented attitude
- Organized and detail oriented person
- Problem solving skills, analytical mind and positive attitude
- Results oriented and focused on meeting deliverable timelines

- Problem-solving attitude
- Ability to establish priorities
- Team work and willingness to listen to others
- Eagerness to learn new ideas, concepts and technologies
- Fluency in Romanian and English is a must

**Location:**

Customer's headquarter, Piata Victoriei (near subway station)
