

QA Analyst (Consumer Product Delivery)

Job description:

We are seeking dedicated specialists, determined to build a successful career in Software Quality Assurance. In Bitdefender, QA Analysts are valued professionals performing critical functions in the software development life cycle and have decisive contribution on product success.

As a QA Analyst your tasks will include:

- Reviewing and commenting on product specifications and designs;
- Creating test plans and test cases, including automated tests;
- Updating test plans and test cases, including automated tests;
- Performing tests against builds and test procedures;
- Designing and implement automated test suites;
- Ensuring the product fulfills all target requirements before each release;
- Acting as customer advocate; providing risk analysis for the product and ensure that all issues were addressed prior to product delivery;
- Compile test reports for the area of responsibility.

Requirements:

- Windows operating system; installation/configuration/administration experience;
- Commercial software QA experience;
- Basic scripting / programming knowledge;
- Basic understanding of testing concepts, methodologies and processes;
- Experience with test case management tools / bug tracking tools;
- Good analytical skills / problem solver;
- Ability to meet deadlines and work under pressure;
- Enthusiastic team player;
- Good command of written/spoken English;
- Attention to details.

Any of the following skills is a plus:

- General networking knowledge;
- Performance testing experience;
- Automated test tool experience.

If you take up our offer, you will have:

- Excellent salary – according to your value;
- Private medical and accident insurance;
- Dynamic and very professional team;
- Career development programs.
